Applicant's election of Group I, lollipop, phosphate buffer, and dextrose in the reply filed on 3/8/07 is acknowledged. Because applicant did not distinctly and specifically point out any errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4, 6-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ackman et al in view of Zhang et al.

Ackman et al teach compositions for improving sleep (title). Methadone, an opioid, is disclosed (column 4 line 32). Lollipops are specified (column 10 line 30).

Zhang et al teach a transmucosal drug dosage form with improved oral mucosal delivery of a pharmaceutical agent (abstract). Lollipops are disclosed (claim 24). Dextrose is specified (claim 20). Phosphate buffer is disclosed (column 11 lines 27-28). Opioid agonists are disclosed (column 9 lines 39-42). 0.05-5 mg dosages are specified (column 9 Table 1).

It would have been obvious to one of ordinary skill to use the Zhang et al vehicle to deliver the Ackman et al composition to achieve the beneficial effect of improved oral mucosal delivery. As to the claimed pH, Zhang et al disclose the same buffer as

claimed. An optimum suitable pH range can be established by routine experimentation, absent a showing of criticality or unexpected results.

No claims allowed.
